MIAOBIN(TINA) LIANG

I am currently a senior high school student at San Francisco International high school. I am taking this class because I am interested in graphics design. So, I want to learn some new skills in this class.

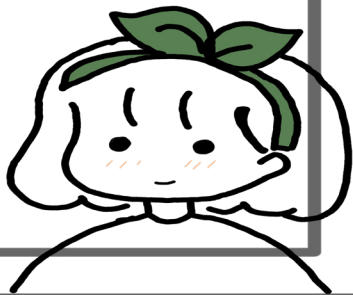

ME

I've heard before that Photoshop is a very professional software, so I am very happy that I can learn more about this program in here. Next, I think because I am not familiar with the operation of this software, so I am not very satisfied with my final project. On the whole, I think it's OK. (This project is I think the most on and spend the most time to finish.)

PHOTOSHOP***

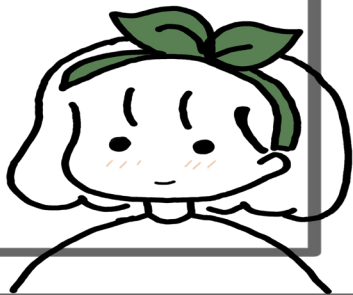

HAPPY EVERYDAY

HAPPY EVERYDAY

The first time I used this software, I fell in love with it because the finished product was my favorite type. This software also gives me a sense of intimacy because I have done this kind of drawing before in Mathematics Project, but Mathematics is a picture that made out of lots of equation. I like this software more than using the math one because, at that time, I lost more hair than usual.

***ADOBE
ILLUSTRATOR***

The last thing I want to say is the Animator final project. I really couldn't believe I could make the picture "move" before I came into contact with this software. I felt really happy and have a sense of accomplishment. The background of this project is my own synthesis and the two characters are cartoon characters, which I like very much.
